FAS wetter area – Wetland grass seed mix
Emorsgate EP1 pond edge mixture 4g/m² Wild
seed

<https://wildseed.co.uk/mixtures/view/13>

Emorsgate Seeds – (01553) 829
028 (wildseed.co.uk)

There is a natural early low flood flow channel forming so let's make that more established, retain current width and depth that is forming under the bridge, add some contour to take energy out of the channel when in flood

Add some boulders to deflect flow, reduce energy in channel, create some margins where volunteers can plant aquatics etc.

We created a barrage of reed pallets to reduce debris getting to the open pipe outtake, lets deepen this area to 400mm so that it hopefully remains wetter in all seasons for as long as possible and add more reed pallets (TBC if there are spare from the delivery on 29th)
